

FDOT DISTRICT 2
DR-4734
2023 - 2024

SERVICES PROVIDED:

- Field Debris Monitoring
- Data Management
- Invoice/Ticket Reconciliation
- Reporting and FEMA Documentation Support
- Equipment Certification
- QA/QC Oversight
- Training
- Field Team Coordination
- Monitoring the Monitor™ Program

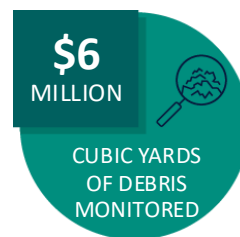

HURRICANE IDALIA – COMPLIANCE & RECOVERY SERVICES

Following the strongest storm to strike the Big Bend region of Florida in more than a century, the Florida Department of Transportation’s District 2 activated Eisman & Russo, Inc.’s pre-event Disaster Monitoring contract to oversee emergency access and debris removal operations. As a first tier subconsultant, Synergy Disaster Recovery provided critical field and data management support throughout the operation, working across seven fiscally constrained counties in North Florida.

Synergy deployed over 125 field and office personnel to support FEMA Category A and B recovery efforts, ensuring accurate documentation and compliance with all federal and state guidelines. The team contributed to certifying more than 750 trucks and documenting over 350,000 debris tickets across 41 debris management sites.

In partnership with Eisman & Russo and FDOT, Synergy’s monitoring and data teams helped manage the removal and disposal of millions of cubic yards of vegetative and C&D debris and 230,000 hazardous trees. Synergy’s meticulous reporting, reconciliation, and QA/QC processes were instrumental in expediting FEMA reimbursement documentation and maintaining operational transparency across all contracted work.
